

Vulnerability Management

An effective vulnerability management program will reduce your risk of a security breach.

Attackers are constantly looking for software vulnerabilities to exploit. They can create an exploit for a vulnerability within weeks and know many organizations are vulnerable for years after. Creating a Vulnerability Management program is necessary for preventing costly cybersecurity breaches and incidents, as well as meeting regulatory compliance for programs like HIPAA and PCI DSS. Partnering with All Lines Technology will yield you an effective vulnerability management program to reduce your risk.

The key benefits to our program service include:

- A comprehensive asset inventory
- Regular vulnerability scanning for internal and external networks
- Risk-prioritized reporting with a near-zero false positive rate
- Optimized integration with your remediation processes
- Regular measurements for continuous improvement
- Optional service available to also manage your remediation processes
